

## Measurement Guide

Please provide measurements in inches (to the half inch).

Please take all hose measurements standing straight, looking forward with your feet placed together. Please do not try to take the measurements yourself, it requires two people.

The measurements required for our hose are Calf, Length and Foot. These measurements should be taken as follows:

1. Calf  
Take this measurement firmly around the widest part of the calf. Measure **both** calves taking the largest measurement.
2. Length

Take this measurement up the **side** of the leg from the heel (floor) to 1.5" below the underside of the knee cap (or to where you'd like your hose to sit). We will add extra for the cuff.

### 3. Foot

Take this measurement standing directly on the tape with the big toe on metal end part, measure from the big toe to back of heel. Feel free to add 0.25" for growth to any child under 14.
